EIA
SERVING THE
ELECTRONIC INDUSTRIES

The Electronic Industries Association (EIA), now in its 70th year, is the leading national trade organization representing U.S. electronics manufacturers. Committed to the competitiveness of the American producer, EIA represents the entire spectrum of companies involved in the design and manufacture of electronic components, parts, systems, and equipment for communications, industrial, government and consumer uses.

Originally founded in 1924 as the Radio Manufacturers Association, EIA, with more than 71 years of service to the electronic industries, has maintained a quick reaction capability to recognize problems which are common to the industry or segments of the industry, and to mount action programs leading to the solution of these concerns. Because of its broad representation and its reputation for constructive action, EIA is nationally and internationally recognized as the spokesperson for the U.S. electronic industries.

Membership

EIA membership is open to all firms manufacturing electronic products in the United States. Certain other organizations may be admitted as Associate Members.

Administration

Broad EIA policy is established by a Board of Governors whose members are elected by the various Divisions of the Association. The EIA Executive Committee oversees programs delegated to it by the Board. An experienced professional staff of 180 persons, headed by a salaried president, serves EIA from a headquarters building located in Arlington, VA.

Organization

Organized along product lines, EIA Groups, Sectors, and Divisions are the action centers around which most of the Association's work revolves. They provide the concentrated and specialized attention required by the issues facing the electronic industries, particularly the interface with legislative and regulatory bodies on the federal and state levels. Each Sector, Group/Division has its own mandate and objectives, its own Board of Governors, and initiates its own agendas. Each implements its own activities to meet the needs of its industry segment. Association members may belong to as many Groups/ Divisions as appropriate to their product lines. Sectors/Groups/Divisions include: Consumer Electronics Manufacturers Association, Industrial Electronics, Components and Government Divisions; and the Telecommunications Industry Association.

EIA Departments provide services in marketing statistics and other data, engineering standards, legislative and regulatory information, government relations, and public affairs. Services and programs of a broad nature which benefit the entire industry are also provided to the EIA membership through Board of Governors-sponsored programs. The services of all EIA Departments, Councils and Panels, as well as the administrative legal, accounting and production services of the Association, are accessible to each Division.

A SUMMARY OF THE EIA STANDARDIZATION PROGRAM

The EIA Engineering Department operates a comprehensive standardization program as evidenced by over 1,000 standards and publications currently available through EIA. These documents have been prepared and revised by more than 5,000 industry and government representatives who participate on the Engineering Department's 275 Committees and Subcommittees.

EIA standards development activity is conducted through Panels, Committees and Working Groups made up of interested persons from EIA member and non-member companies, government, the academic community, and others. Following Committee and public review and comment, and review by the Engineering Department Executive Committee, the document is published as an official EIA Standard and made available for sale by Global Engineering Documents.

Many EIA Standards become American National Standards (ANSI) approved, and many form the basis of U.S. positions in international standards development in the International Electrotechnical Commission (IEC) and International Organization for Standardization (ISO).

EIA has developed and issued Standard EIA-476-A on Source and Date Code Marking. This Standard outlines requirements for source and date code marking on electronic components and describes the assignment of component manufacturer identification numbers and their sequence on the component to be marked, along with the lot date code.

Other EIA Standards and Publications are listed in a Catalog of EIA, TIA and JEDEC Standards that is available from Global Engineering Documents at 1-800-854-7179. An electronic version of the catalog can be found at <http://www.eia.org>.

EIA SOURCE AND DATE CODE BOOK

1. What is the EIA Source Code?

It is a numeric symbol, assigned and registered by EIA Headquarters, which may be stamped or marked on any or all products to identify the production source or the vendor assuming product responsibility.

The EIA code, in addition, provides for adding numerals to the source code symbol to identify the year and week of production.

2. How does the date code work?

In addition to a source code, it may be desired to mark the date of production. This can be done by adding, following a hyphen (-), the last two digits of the production year plus the number of the week of that year.

A hypothetical example of the application of the EIA date code to the source code follows: Say a company is assigned the source code 113. To this is added two digits for the year - such as "96" for the current year, or "97" for 1997 - and another two digits for the week of the year. The combined source and date codes would be, in this case:

113-9610

which would represent the company's number "113" plus "96" for 1996, the production year, and "10" for the week of March 3 - 9, the production week. For convenience in identifying the week, date code tables in the back of this booklet give the number of each week in both 1996 and 1997.

If a component manufacturer is unable to use the four-digit date code, an alternate three-digit code may be used by taking only the last digit of the year. The example above would then become:

113-610

3. To whom is the EIA service available?

To all manufacturers of radio-television and electronic equipment components. This service is extended to all EIA members without charge. For non-members an annual registration fee of \$50.00 per year is charged.
